

iSpyCams

For BlackBerry

Getting Started Guide

iSpyCams is your window to the world!

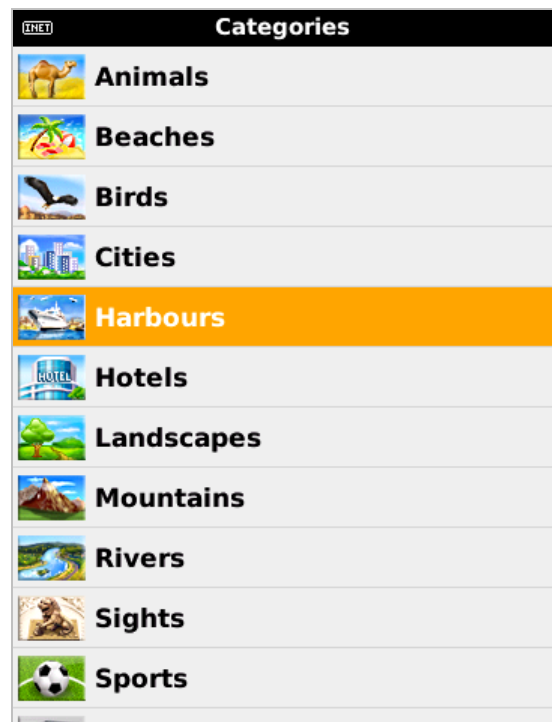

View popular webcams from all around the globe organized by Popularity, Categories and Countries in a full-screen video stream. Categories include: Beaches, Animals, Cities, Harbors, Hotels, Landscapes, Mountains, Rivers, Sights, Sports and more.

New streaming cameras are being added weekly. Vote for your favorite webcams!

Enjoy friendly user interface in English, German, French, Italian and Spanish.

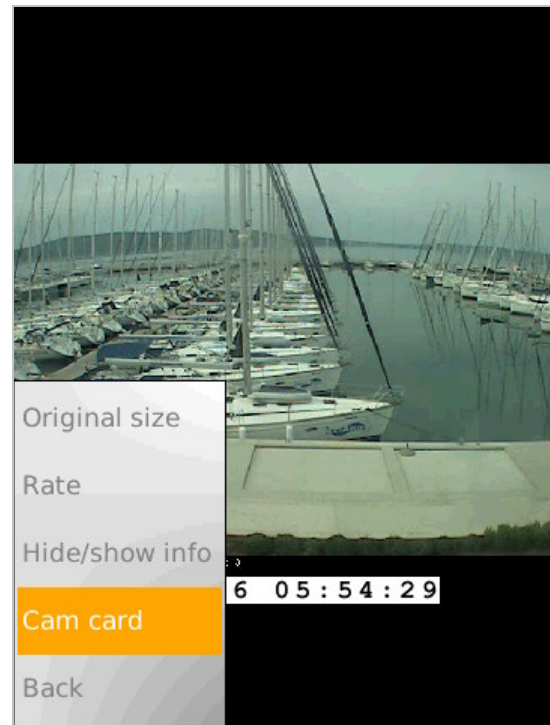

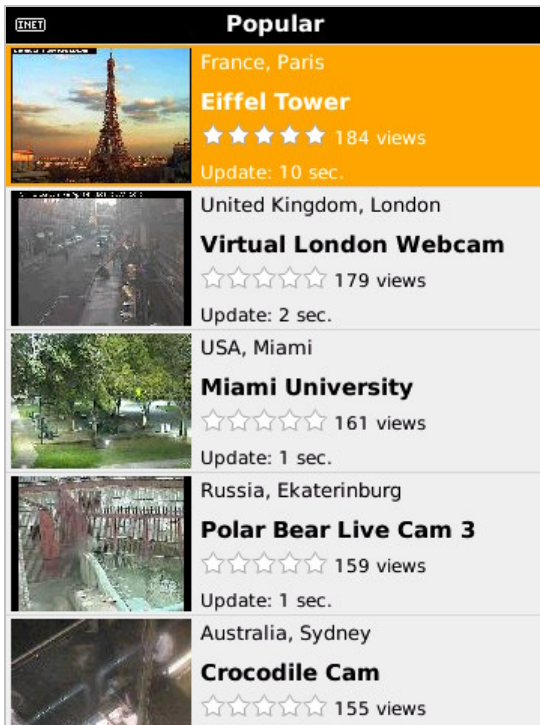

- **Dashboard**

The dashboard is the basic screen of the application. You can easily get to any camera list form here.

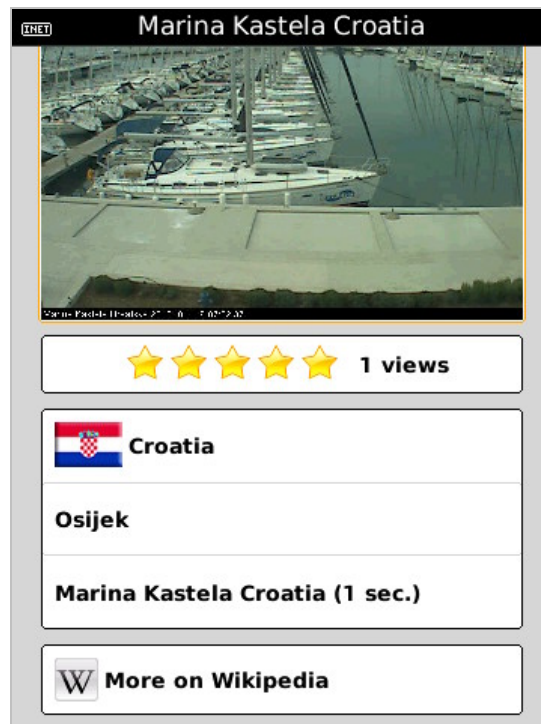

- Public cameras

Public cameras from all over the world are sorted by their popularity, categories and geographical location. You can view and rate public cameras that are added weekly.

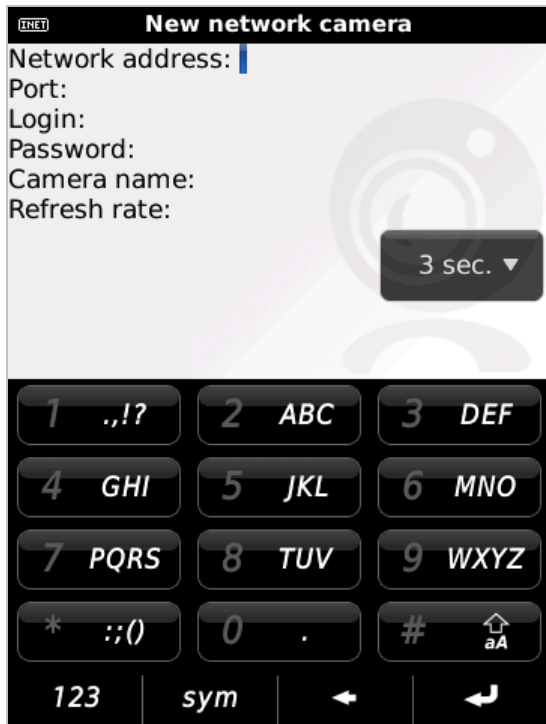

Also you can learn many interesting things about the view shown by a specific public camera on Wikipedia from the camera card. (Select **Cam card** menu item.)

▪ My cameras

At first start **My cameras** list is empty. You can add network cameras (public or your own) and view them directly.

To add a new camera to your camera list you should tap **New camera** button. Enter camera's network address, port, authorization data (login and password) if it is needed. You are also asked about the camera manufacturer and the model (this will speed up camera testing procedure). If you are not sure you may not enter this information.

Before saving the network camera the connection to it must be tested. If the test is passed successfully you will see the new network camera icon  in your camera list. You can view this camera immediately.

If the test failed you are recommended to edit the camera settings. You can also save it anyway and the camera with an icon  (not tested) will appear in your camera list. In this case the test will be launched automatically at every connection attempt.

To connect to the camera select the camera in My cameras list. After the 'Connecting...' screen the application starts showing the image from your camera.

You can **Zoom in and out** by selecting the corresponding menu item.

Select **Show/Hide info** from the menu or press # key on the smartphone to show/hide additional information like a timestamp.

Press **Escape** key to disconnect from the camera.

▪ Support

If you faced with any problems while using the application please read the FAQ section at www.warelex.com. If you need some further assistance after reading the FAQ section you may send a request to our support team (select **Support** from the Dashboard menu).
